

# TECHNICAL

This column will be dedicated to technical aspects of Dan Wesson products and refinements that enhance performance. It will be on the order of a gunsmithing or technical

paper reflecting items, comments and procedures that you can apply to your Dan Wesson product to enhance it in some way or form. We encourage our customers to write us with either

technical questions or procedures that they may have. This way we can share these items with the rest of the Dan Wesson shooters. This column should be of interest to all.

## *A word on the NET.*

*Many of you have been contacting me on my AOL address and I have responded to all that I could. We have been experiencing lock-ups of our system during answering of mail, then when we reenter the system the mail is gone. So if some of you have not received a response from your E-mail please don't be offended, try again or mail us via US mail at the address on the back of this news letter.*

## NO MAN STANDS ALONE

Through all of the actions needed to bring the Dan Wesson Company back to a stable existence, no one man can take the credit for this enormous feat. Many people and

*Many people and organizations deserve much credit and thanks for helping the Dan Wesson Co. return to it's place in industry with dignity and a strong footing*

organizations played an instrumental part in bringing the Dan Wesson company back.

With today's liberal media and anti-gun rhetoric that plagues the communication networks, there are still people and organizations that still support firearms manufacturing and manufacturing as a whole. For the most part any press we hear of about or related to firearms is generally bad, especially when persons from different organizations join efforts to give a company a strong foothold again. I would like to dedicate this column to the people

and organizations that have played a part in helping NYI Corp. bring the Dan Wesson Co. back with a great foundation to start from again. We will also spotlight people and organizations that are helping the firearms industry and gun owners in a positive way.

## PRODUCTION

**T**he most asked question so far has been "When can I see new Dan Wesson products?" The first years master schedule has been completed and production is now underway for barrels and barrel assemblies. New firearm build will start in the March - April time frame. Parts and service are available now.

The new factory is

still bustling with new equipment and tooling coming in daily. NYI's staff of engineers and journeyman toolmakers are busy assessing the original Dan Wesson tooling and making new changes where needed.

The gunsmithing area is staffing up with new lead gunsmiths. All lead gunsmiths at the new Dan Wesson Co. are required to be journeyman toolmakers in ad-

dition to their pistolsmithing skills.

Many production processes and manufacturing techniques are being implemented for new production. The new products will reflect a superior quality target handgun.

We will continue to keep you informed on the status of our production. We thank all of our customers for their patience during this time of start-up.
